

Workshop and Networking Event on Artificial Intelligence in Research and Applications

RUE DU TRONE 98
BRUSSELS
8TH FLOOR

7 October 2019
12.30-17.30

Programme:

11.30-12.30	Light lunch
12.30-12.40	Opening remarks
12.40-13.00	Presentation of topics <i>NCP ICT - tbc</i>
13.00-13.20	AI in Horizon Europe <i>EC, DG CONNECT - tbc</i>
13.20-15.00	Presentation of project ideas
15.00-15.15	Coffee break
15.15-17.00	Networking session
17.00-17.30	Closing remarks

Artificial intelligence (AI) is in the heart of the ongoing major transformation of European society, economy, and industry. It is the driving force that enables practical applications of new, previously infeasible, functionalities such as computer vision, virtual assistants, chatbots, virtual and augmented reality, autonomous driving, self-adaptation, and intelligent control, smart homes and cities, intelligent transportation and so on. Together with big data processing and machine learning, basic as well as application-driven AI research is essential for the development of the next generation of products and services across all areas.

This event will sum up current directions of AI research and applications, point out the most pressing open application problems that ought to be addressed by AI, and facilitate networking between various actors in the field of AI research and applications. It will take advantage of the specific challenges, unique research environment, national and regional research policies, and the application potential of the Czech Republic, Slovakia, and Poland, and their relation to European and international policies and funding.

Registration is available at
